- OK, I had a chance to review things with Marcus. Here is what he is willing to do. He will sell 500,000 ABTC for \$1/token. He is willing to leave \$250,000 of that with you to be used for the program and wants \$250,000 of that amount sent to the company for use in the patenting and licensing. So, you will have a budget of \$250,000 to effect a significant change in the volume and, more importantly, the price of the token. He expects that you will need to use a portion of that for purchasing, but he leaves it to you to do what you need to market properly. The coin purchaser (Quinn?) will sign a purchase agreement with NAC for the tokens, along the lines of the one you signed both times. He will not provide additional tokens beyond this. Please let me know if you can work with this. If not, I'm not sure where we can go from here, but hopefully this will work.
